Cloud Computing

Practical No. 2: Virtualization

Aim: Installation and Configuration of virtualization using KVM.

Step 1: Install the System

```
acer@ubantu:~$ sudo apt-get install
[sudo] password for acer:
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
0 upgraded, 0 newly installed, 0 to remove and 11 not upgraded.
```

Step 2: Check CPU Virtualization Support

Verify whether the processor supports virtualization:

```
acer@ubantu:~$ cat /proc/cpuinfo
processor       : 0
vendor_id       : AuthenticAMD
cpu family      : 25
model           : 80
model name      : AMD Ryzen 7 5700G with Radeon Graphics
stepping        : 0
microcode       : 0xffffffff
cpu MHz         : 3792.782
cache size      : 512 KB
physical id     : 0
siblings        : 8
core id         : 0
cpu cores       : 8
apicid          : 0
initial apicid  : 0
fpu             : yes
fpu_exception   : yes
cpuid level     : 13
wp              : yes
flags           : fpu vme de pse tsc msr pae mce cx8 apic sep mtrr pge mca cmov
pat pse36 clflush mmx fxsr sse sse2 ht syscall nx mmxext fxsr_opt rdtscp lm cons
tant_tsc rep_good nopl nonstop_tsc cpuid extd_apicid tsc_known_freq pni pclmulqd
q ssse3 cx16 sse4_1 sse4_2 movbe popcnt aes rdrand hypervisor lahf_lm cmp_legacy
```

Step 3: Install KVM and Required Packages

Install essential virtualization packages:

```
acer@ubantu:~$ sudo apt-get install qemu-kvm libvirt-bin bridge-utils virt-manag
er
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
Note, selecting 'qemu-system-x86' instead of 'qemu-kvm'
Package libvirt-bin is not available, but is referred to by another package.
This may mean that the package is missing, has been obsoleted, or
is only available from another source
```

Roll No: 59

Step 4: Perform the following commands

```
acer@ubantu:~$ sudo adduser rait
info: Adding user `rait' ...
info: Selecting UID/GID from range 1000 to 59999 ...
info: Adding new group `rait' (1002) ...
info: Adding new user `rait' (1002) with group `rait (1002)' ...
info: Creating home directory `/home/rait' ...
info: Copying files from `/etc/skel' ...
New password:
BAD PASSWORD: The password is shorter than 8 characters
Retype new password:
passwd: password updated successfully
Changing the user information for rait
Enter the new value, or press ENTER for the default
        Full Name []: mac
        Room Number []:
        Work Phone []:
        Home Phone []:
        Other []:
Is the information correct? [Y/n] y
info: Adding new user `rait' to supplemental / extra groups `users' ...
info: Adding user `rait' to group `users' ...
```

```
acer@ubantu:~$ sudo deluser rait
info: Removing crontab ...
info: Removing user `rait' ...
acer@ubantu:~$
```

```
acer@ubantu:~$ sudo apt install libvirt-client
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
E: Unable to locate package libvirt-client
```

Step 5: Install and Launch Virtual Machine Manager

```
acer@ubantu:~$ sudo apt install virt-manager
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
The following additional packages will be installed:
  cpu-checker dmeventd gir1.2-ayatanaappindicator3-0.1 gir1.2-gtk-vnc-2.0

QEMU/KVM

Step 6: Further Follow the given following steps

Dhiraj Lande
Roll No: 59

New VM
Create a new virtual machine
Step 1 of 5
Connection: QEMU/KVM
Warning: KVM is not available. This may mean the KVM package is not installed, or the KVM kernel modules are not loaded. Your virtual machines may perform poorly.
Choose how you would like to install the operating system
Local install media (ISO image or CDROM)
Network Install (HTTP, HTTPS, or FTP)
Import existing disk image
Manual install
