CLOUD COMPUTING

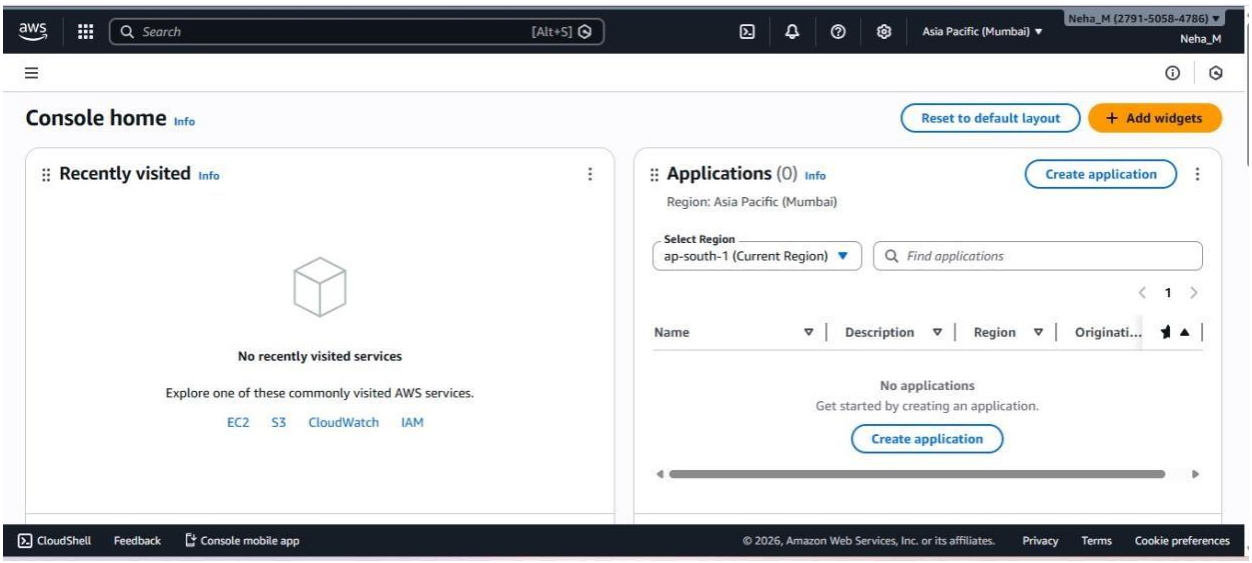
Practical no 5: AWS S3

Aim: Creating a Cloud Storage Bucket in AWS S3

Step 1: Login to AWS Console

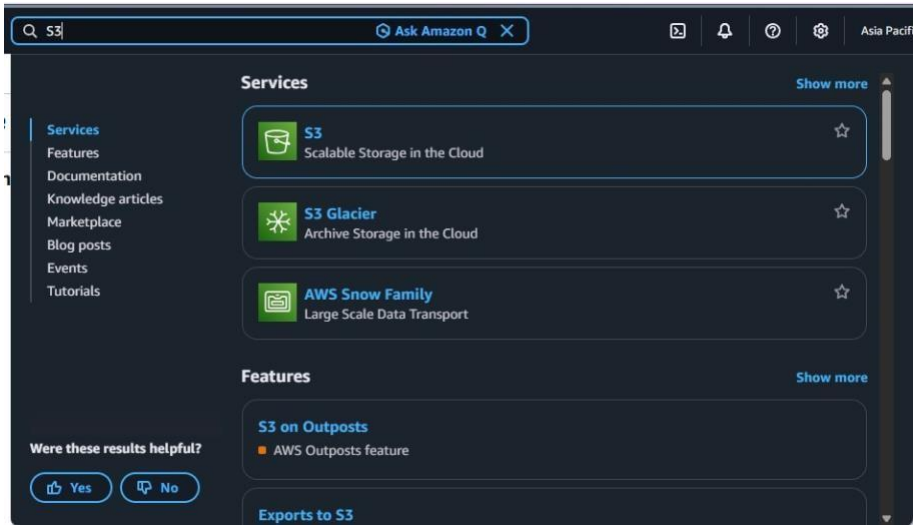
Go to https://aws.amazon.com and login to AWS Management Console.

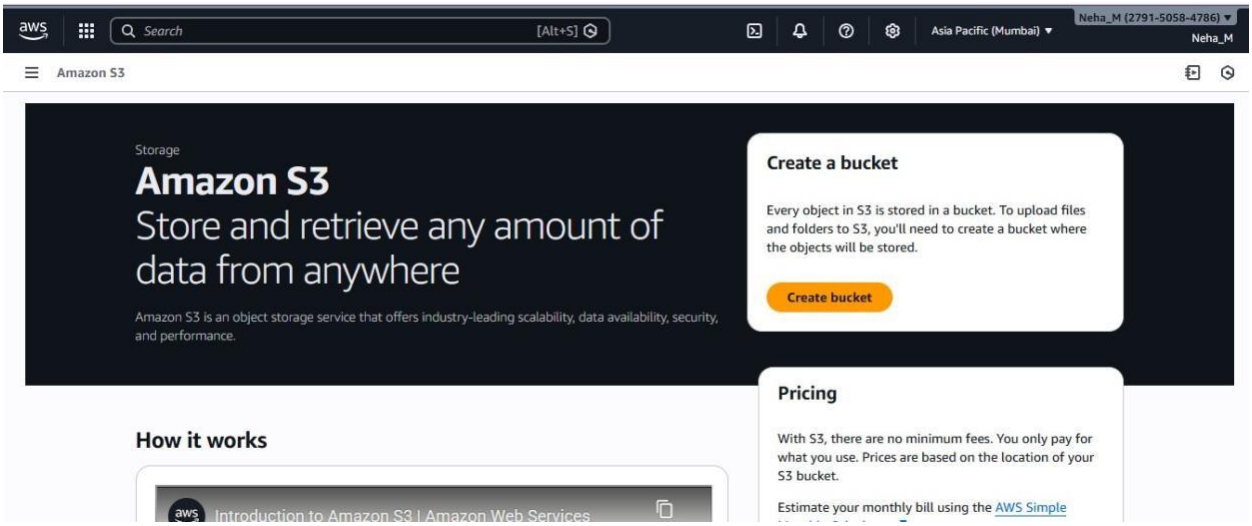
Select region **Asia Pacific (Mumbai – ap-south-1)**.



Step 2: Open Amazon S3

From Services menu, select **Amazon S3**.



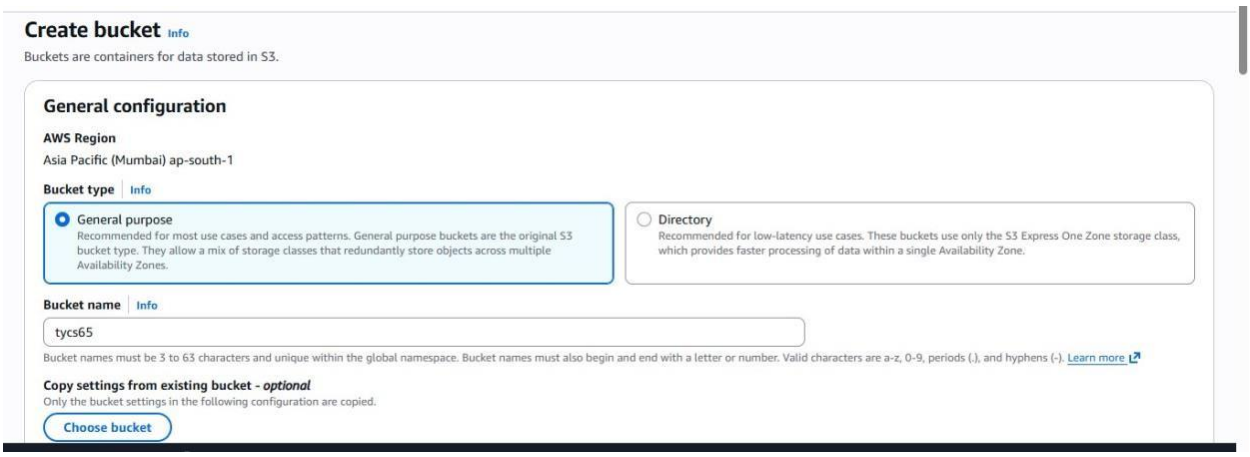


Step 3: Create S3 Bucket

Click on **Create bucket**.

Select **General purpose** bucket type.

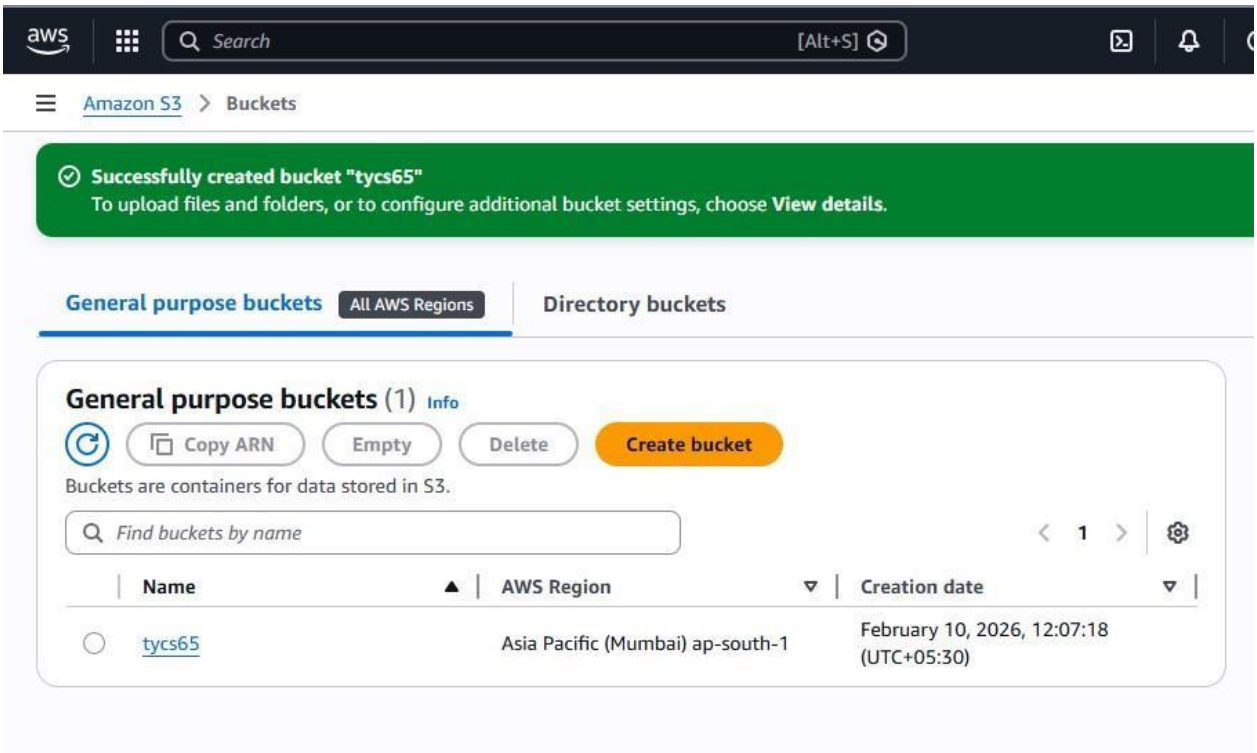
Enter bucket name as **tycs65** and keep default settings.



Step 4: Bucket Creation

Click on **Create bucket**.

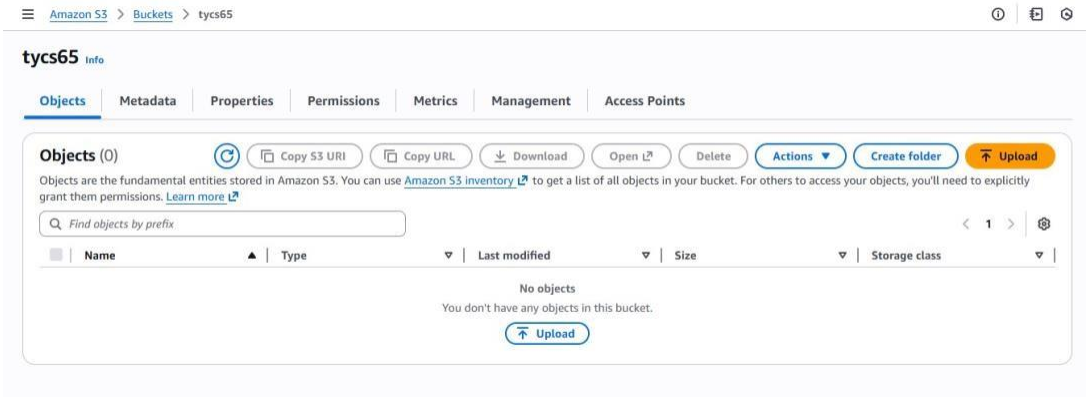
Bucket is created successfully.

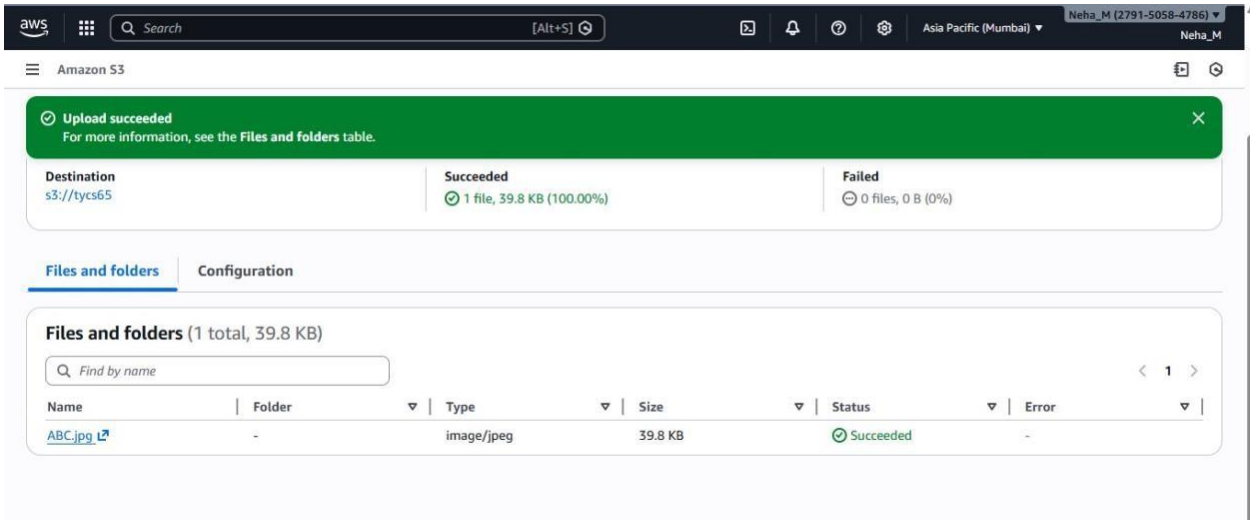


Step 5: Upload Files

Open the created bucket **tycs65**.

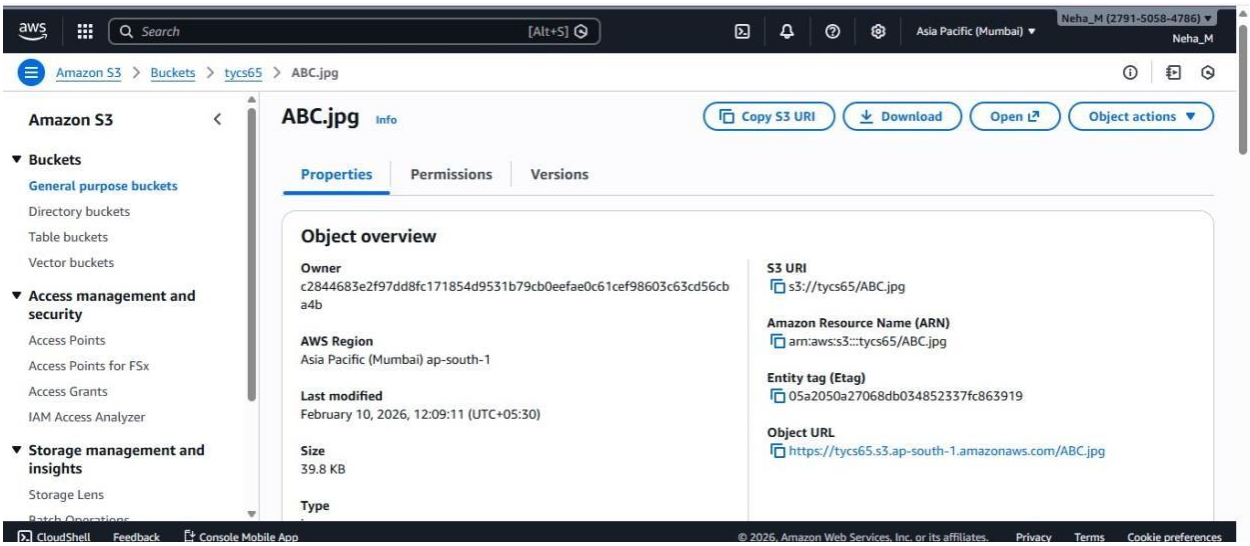
Click on **Upload** and select file **ABC.jpg** from local system





Step 6: Verify Upload

After upload completion, verify file details such as file size, type, S3 URI, and Object URL.



Step 7: Copy Object URL

Click on the uploaded file **ABC.jpg**.

Copy the **Object URL** from object properties.

Step 8: Access File Using Browser

Paste the copied **Object URL** into the web browser to view the uploaded file.
